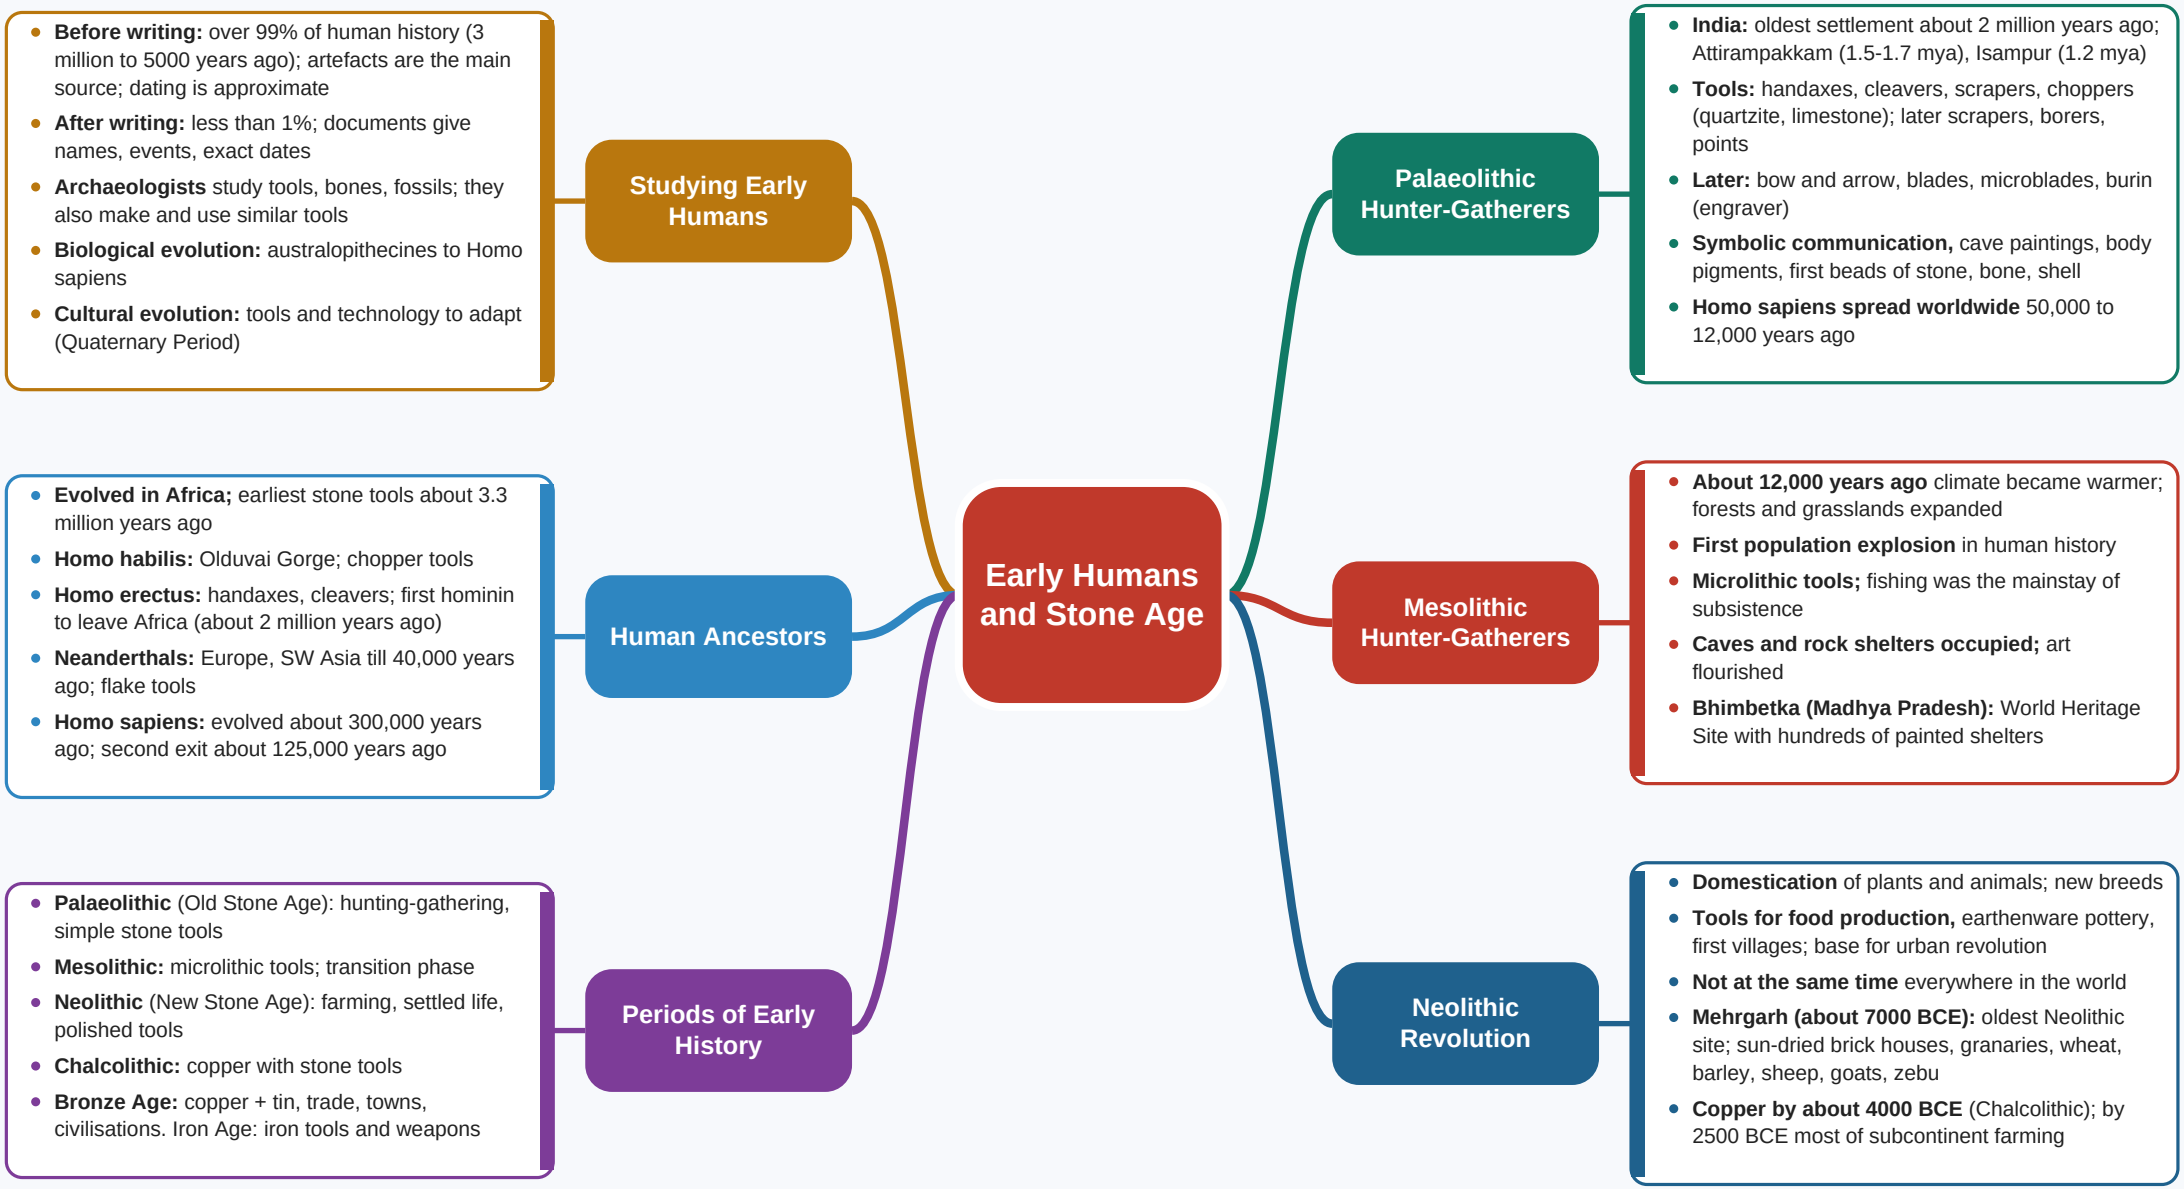
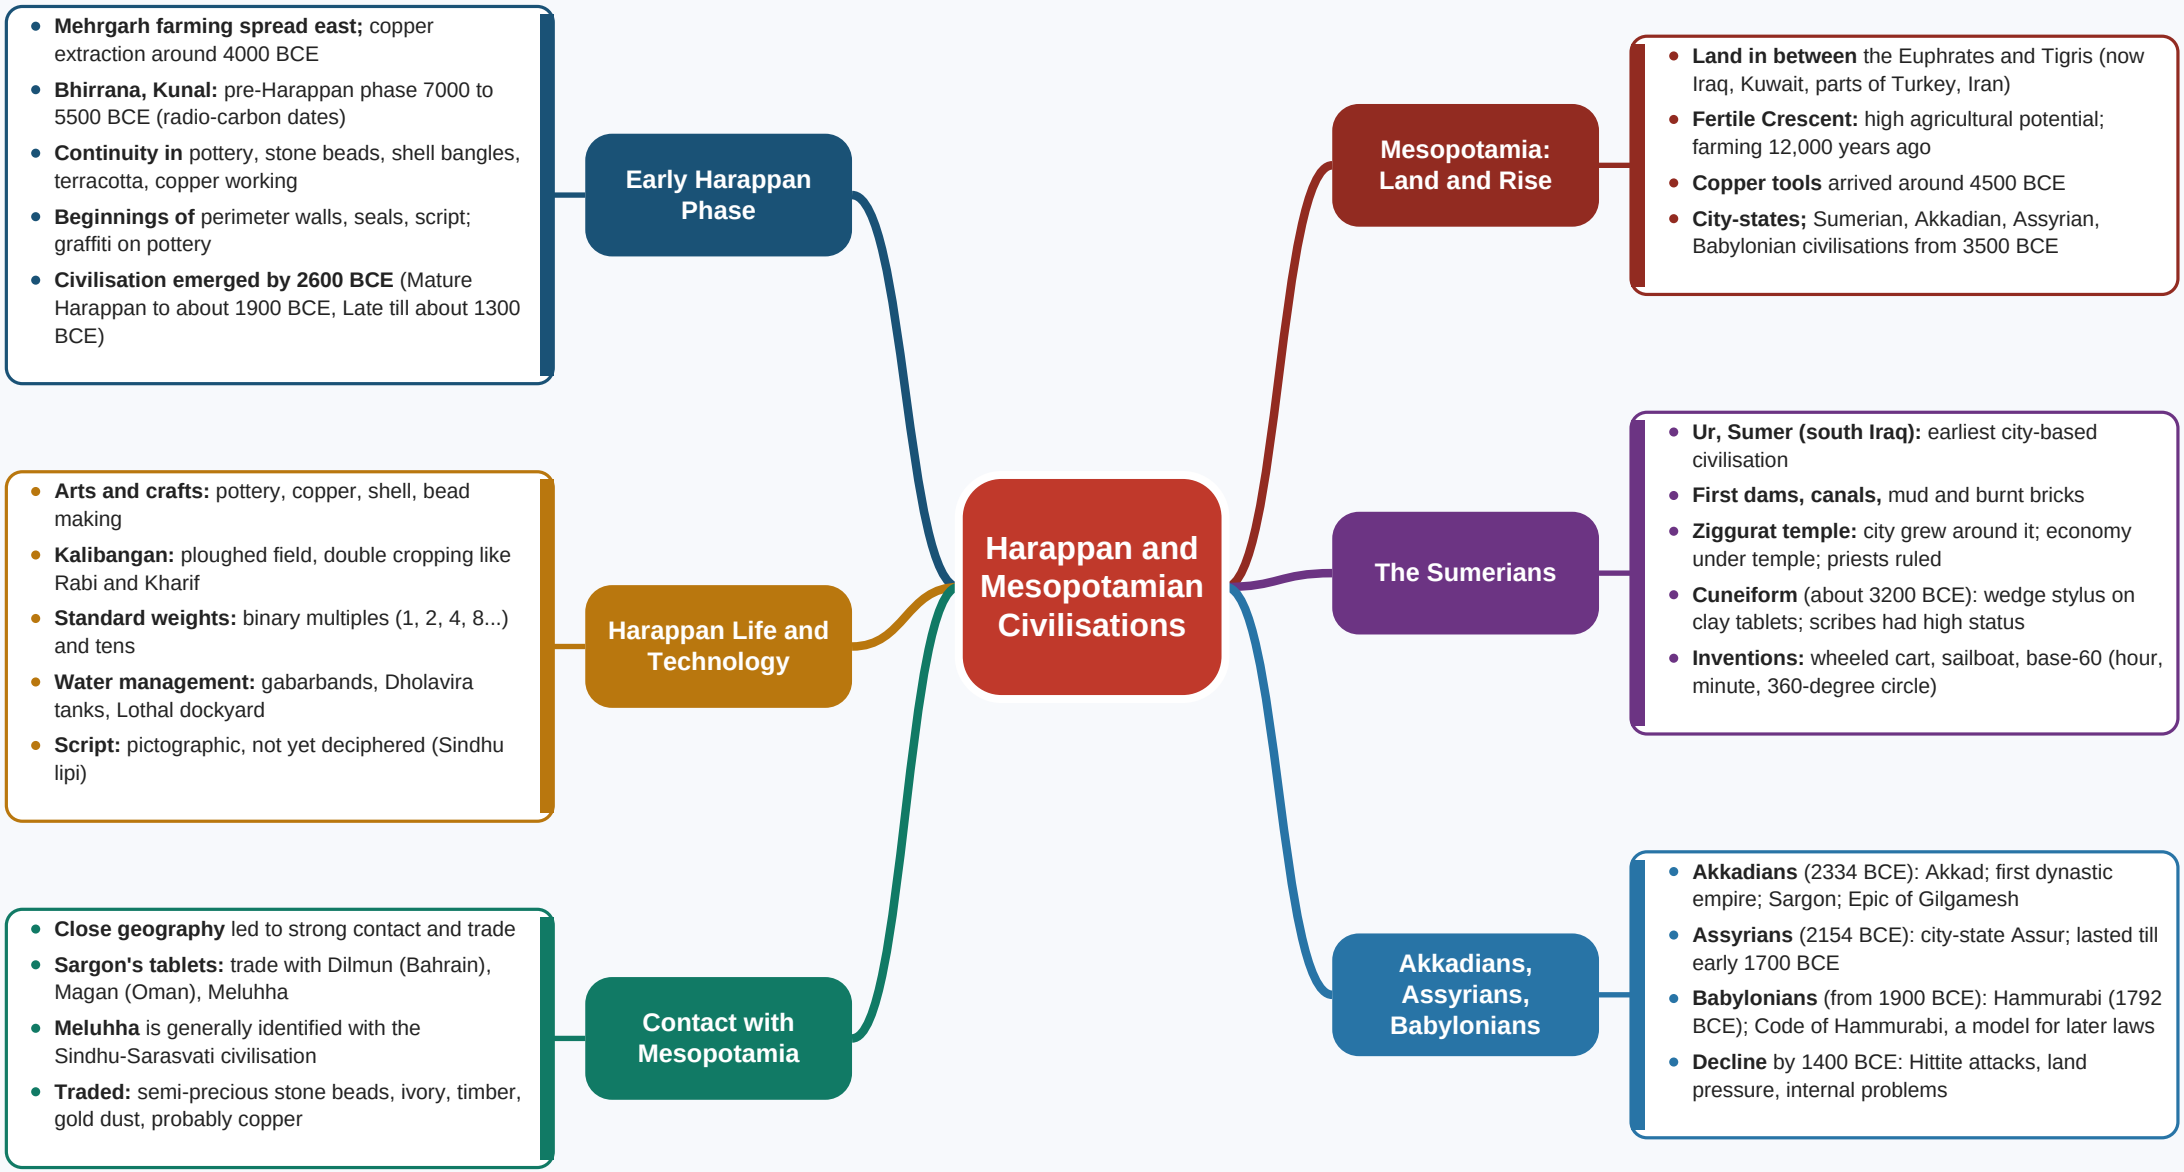
Mind Map 1: Early Humans and Stone Age



Don't miss out: Neolithic Revolution = shift from hunting-gathering to food production. Early human history is studied mainly through archaeology (tools, fossils, cave art).

Mind Map 2: Harappan and Mesopotamian Civilisations



Don't miss out: Cuneiform was contemporary with the Harappan script, but cuneiform has been deciphered and the Harappan script has not.

Mind Map 3: Egypt, China and Common Features

Don't miss out: Rivers gave water and fertile soil, so early civilisations grew in river plains. All four Bronze Age civilisations developed independently.
